

# Electronics/Telecom

Shipping in containers is an economical and safe way of shipping most types of cargo. But putting cargo into a container also involves a constant risk of moisture damages for almost every kind of cargo on every voyage.

Absortech is a reliable partner with our head office in Sweden and an integrated, global supply chain. We have specialists following the specific needs in a wide range of industries so we can offer you effective moisture protective solutions.

## ABSORINSIGHT

This industrial segment contains sensitive electronics and components. It is characterized of both high value per packaging and high value per container shipped. Meaning that big values are at stake in every shipment.

Corrosion and other moisture damages can destroy the products. And a damaged product has a great negative impact on brand. Often the packaging itself is exposed on the shop shelf and needs to be in perfect condition. A damaged box means the product is impossible to sell. Consequently, keeping the relative humidity on a safe level during transport essential. The root cause for corrosion will be eliminated and as a result corrosion will not take place.

An easy and cost-efficient solution is to use desiccants to absorb the excess moisture during shipment, meaning the goods are arriving in the same condition as loaded. Our desiccants are using calcium chloride which significantly outperforms traditional methods.

## Typical moisture damages

-  Corrosion
-  Peeling labels
-  Damaged packaging
-  Collapsed packaging
